Unit 2

Word Problem: double-radius

Write a function *double-radius*, which takes in a radius and a color. It produces an outlined circle of whatever color was passed in, whose radius is twice as big as the input.

Contract+Purpose Statement

Every contract has three parts:

```
# _____________ : ____________________________________ → ___________
    name                          Domain                      Range

# ____________________________________________________________________________
                        What does the function do?
```

Give Examples

Write examples of your function in action

```
examples:

  _________________(_____________________) is
        the user types…

  ____________________________________________________________________________
                    …which should become

  _________________(_____________________) is
        the user types…

  ____________________________________________________________________________
                                    …which should become
end
```

Function

Circle the changes in the examples, and name the variables.
Write the code, copying everything that isn't circled, and using names where you find variables!

```
fun  _____________________(_____________________) :

  ____________________________________________________________________________

end
```

Word Problem: double-width

Write a function *double-width*, which takes in a number (the length of a rectangle) and produces a rectangle whose width is twice the given length.

Contract+Purpose Statement

Every contract has three parts:

```
# _____________ : _____________________________________ → ___________
    name                          Domain                      Range

# ____________________________________________________________________________
                        What does the function do?

```

Word Problem: next-position

Write a function *next-position*, which takes in two numbers (an x and y-coordinate) and returns a JumperState, increasing the x-coordinate by 5 and decreasing the y-coordinate by 5.

Contract+Purpose Statement

Every contract has three parts:

```
# _____________ : ____________________________________ → ___________
    name                          Domain                      Range

# ____________________________________________________________________________
                        What does the function do?
```

Give Examples

Write examples of your function in action

Data Structure

A CakeType is a **flavor, layers, & is-iceCream**

```
data CakeType:
    | cake(_____________________________________________
           _____________________________________________
           _____________________________________________)
end
```

To make instances of this structure, I would write:

cake1 = _____

cake2 = _____

To access the fields of **cake2**, I would write:

_____

_____

_____

Word Problem: taller-than

Write a function called *taller-than,* which consumes two CakeTypes, and produces true if the number of layers in the first CakeType is greater than the number of layers in the second.

Contract+Purpose Statement

```
# _____ : _____ → _____

# _____
```

Give Examples

Write examples of your function in action

```
examples:
  _____(_____) is
```

the user types…

Function

Circle the changes in the examples, and name the variables.
Write the code, copying everything that isn't circled, and using names where you find variables!

```
fun _____(_____) :
```

_____

```
end
```

Word Problem: will-melt

Write a function called *will-melt,* which takes in a CakeType and a temperature, and returns true if the temperature is greater than 32 degrees, AND the CakeType is an ice cream cake.

Contract+Purpose Statement

```
# _____ : _____ → _____

# _____

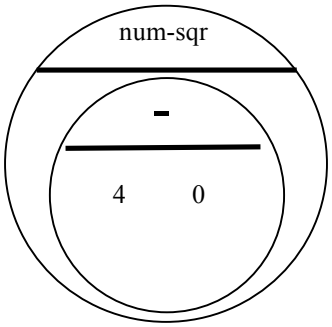
Distance:

The Player is at **(4, 2)** and the Target is at **(0, 5)**.
Distance takes in the player's x, player's y, character's x and character's y.

Use the formula below to fill in the EXAMPLE:

$$\sqrt{(4-0)^2+(2-5)^2}$$

Convert it into a Circle of Evaluation. (We've already gotten you started!)



Convert it into Pyret code:

Word Problem: distance

Write a function `distance`*, which takes FOUR inputs:*

- *px: The x-coordinate of the player*
- *py: The y-coordinate of the player*
- *cx: The x-coordinate of* another game character
- *cy: The y-coordinate of another game character*

It should return the distance between the two, using the Distance formula:

$$Distance^2 = (px - cx)^2 + (py - cy)^2$$

Contract+Purpose Statement

Every contract has three parts:

```
# _____ : _____ -> _____
```

name Domain Range

```
# _____
```

What does the function do?

Give Examples

Write examples of your function in action

```
examples:
    _____(_____)        is

Animation Design Worksheet

Draw a sketch for three distinct moments of the animation

Sketch A Sketch B Sketch C

What things are changing?

Thing	Describe how it changes

What fields do you need to represent the things that change?

Field name (dangerX, score, playerIMG…)	**Datatype** (Number, String, Image, Boolean…)

Make a To-Do List, and check off each as "Done" when you finish each one.

Component	***When is there work to be done?***	**To-Do**	**Done**
Data Structure	*If any new field(s) were added, changed or removed*	☐	☐
draw-state	*If something is displayed in a new way or position*	☐	☐
next-state-tick	*If the Data Structure changed, or the animation happens automatically*	☐	☐
next-state-key	*If the Data Structure changed, or a keypress triggers the animation*	☐	☐
reactor	*If either next-state function is new*	☐	☐

Define the Data Structure

```
# a _____State is _____________________________

data _____State:

| _____(_____________________________________

       _____________________________________

       _____________________________________

        _____________________________________)
end
