

Check for Mistakes in this Word Problem: target-leap

Directions: Write a function which takes in the target's x-coordinate and makes a player leap by returning an x-coordinate that is double the original x-coordinate.

Contract and Purpose Statement

Every contract has three parts...

;

target-leap

number

→

number

player name

player

output

;

Takes the x-coordinate and returns a new one, multiplied by 2

Examples

Write some examples, then circle and label what changes...

(EXAMPLE(target-leap 100) (200))

player name

input

what the function produces

(EXAMPLE(target-leap 40) (200))

player name

input

what the function produces

Definition

Use the definition, given variable names to all your input values...

(define(leap x-coord)

(* x 5)
