

Check for Mistakes in this Word Problem: target-leap

Directions: Write a function which takes in the target's x-coordinate and makes a player leap by returning an x-coordinate that is double the original x-coordinate.

Contract and Purpose Statement

Every contract has three parts:--

target-leap

number

number

number

number

number

number

Takes the x-coordinate and returns a new one, multiplied by 2

what does the function do?

Examples

Write some examples, then circle and label what changes.--

EXAMPLE

target-leap

100

200

number

number

what the function produces

EXAMPLE

target-leap

40

200

number

number

what the function produces

Definition

Write the definition: given variable names to all your input values.--

define

leap

x-coordinate

number

number

(* x 5)

number

what the function does with those variables
