

Word Problem: rocket-height

Directions: A rocket blasts off, traveling at 7 meters per second. Write a function called 'rocket-height' that takes in the number of seconds that have passed since the rocket took off, and which produces the height of the rocket at that time.

Contract and Purpose Statement

Every contract has three parts ...

;

MMMMMMMMMMMMMM

:

→

function name

domain

range

;

what does the function do?

Examples

Write some examples of your function in action...

(EXAMPLE

(

MMMMMMMMMMMMMM

)

function name

input(s)

)

what the function does with those inputs

(EXAMPLE

(

MMMMMMMMMMMMMM

)

function name

input(s)

)

what the function does with those inputs

Definition

Write the definition, giving variable names to all your input values...

(define

(
