Word Problem

A rocket leaves Earth, headed for Mars at 80 miles per second. **At the exact same time**, an asteroid leaves Mars traveling towards Earth, moving at 70 miles per second. If the distance from the Earth to Mars is 50,000,000 miles, how long will it take for them to meet?

I. Contract+Purpose Statement

Every contract has three parts:

; _____ : _____ -> _____
name Domain Range

II. Give Examples

Write an example of your function for some sample inputs

_____ = _____
Use the function here What should the function produce?

_____ = _____
Use the function here What should the function produce?

_____ = _____
Use the function here What should the function produce?

_____ = _____
Use the function here What should the function produce?

III. Definition

Write the Formula, giving variable names to all your input values.

_____ = _____
