

Check for Mistakes in this Word Problem: equal-length?

Directions: Write a function that takes in two strings and returns true if their lengths are equal and false otherwise.

Contract and Purpose Statement

Every contract has three parts...

equal-length? : string string → boolean

function nameargumentsresult

: Given two strings, check if they are the same length

what the function does

Examples

Write some examples, then circle and label what changes...

(EXAMPLE (equal-length? ('yes' 'no') )

function nameargumentsresult

(= (string-length 'yes') (string-length 'no'))

what the function does

(EXAMPLE (equal-length? ('dog' 'cat') )

function nameargumentsresult

(= (string-length 'dog') (string-length 'cat'))

what the function does

Definition

Write the definition, give variable names to all your input values...

(define (equal-length? string1 string2 )

function namearguments

(= string1 string2)

what the function does with those variables
