

Contracts

[illegible]

Contracts

[illegible]

[illegible]

The background is a picture of: **sunset**

The coordinates for the PLAYER (NinjaCat) are: (150 , 50)
x-coordinate y-coordinate

The coordinates for the DANGER (Dog) are: (450 , 50)

The coordinates for the TARGET (Ruby) are: (550 , 250)

Our Videogame

Created by (write your names): Jessica and James

Our game takes place in: The Zoo
(space? the desert? a mall?)

The player is a Lion.

The player moves only up and down.

Your player *GAINS* points when they hit the target.

The Target is a Escaped gazelle.

The Target moves only to the left and right.

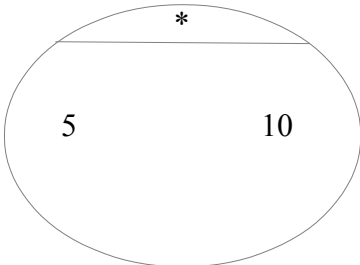

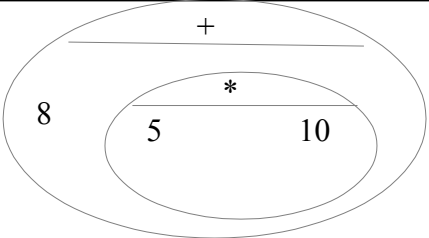

Your player *LOSES* points when they hit the danger.

The Danger is a Zookeeper.

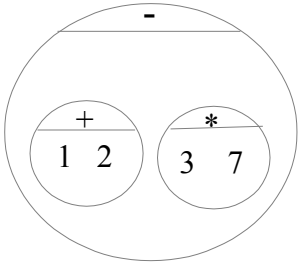

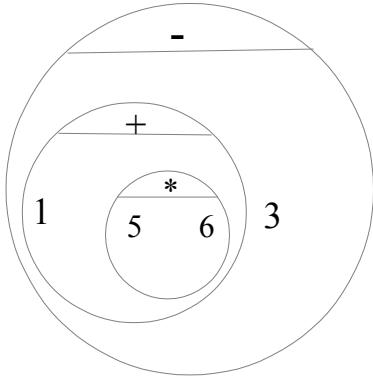

The Danger moves only to the left and right.

Don't forget to use the computer's symbols for things like multiply and divide!

Math	Circle of Evaluation	Racket Code
5×10		<code>(* 5 10)</code>
$8 + (5 \times 10)$		<code>(+ 8 (* 5 10))</code>
$(8 + 2) - (5 \times 10)$		<code>(- (+ 8 2) (* 5 10))</code>
$\frac{5 \times 10}{8 - 2}$		<code>(/ (* 5 10) (- 8 2))</code>

(draw Circles of Evaluation here if you need extra scratch paper)

	Math	Circle of Evaluation	Racket Code
Round 1	$(1 + 2) - (3 * 7)$		$(- (+ 1 2) (* 3 7))$
Round 2	$3 - (1 + 2)$		$(- 3 (+ 1 2))$
Round 3	$3 - (1 + (5 * 6))$		$(- 3 (+ 1 (* 5 6)))$
Round 4	$(1 + (5 * 6)) - 3$		$(- (+ 1 (* 5 6)) 3)$

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Word Problem: rocket-height

A rocket blasts off, traveling at 7 meters per second. Write a function called “rocket-height” that takes in the number of seconds that have passed since the rocket took off, and which produces the height of the rocket at that time.

Every contract has three parts:

; rocket-height : number -> number
name Domain Range

; Takes the number of seconds passed since take-off, and produce current height
What does the function do?

On the computer, write an example of your function in action, using EXAMPLE.

(EXAMPLE (rocket-height 0)
the user types...

(* 7 0))
.....which should become

(EXAMPLE (rocket-height 4)
the user types...

(* 7 4))
.....which should become

Write the Definition, giving variable names to all your input values.

(define (rocket-height time)
function name variable names
(* 7 time))

Word Problem: red-square

Use the Design Recipe to write a function red-square, which takes in a number (the size of the square) and outputs a solid red rectangle whose length and width are the same size.

Every contract has three parts:

; red-square : number -> image
Name Domain Range

; Draws a solid red square of the size given
What does the function do?

On the computer, write an example of your function in action, using EXAMPLE

(EXAMPLE (red-square 5)
the user says...

(rectangle 5 5 "solid" "red")
.....Racket replies

(EXAMPLE (red-square 6)
the user says...

(rectangle 6 6 "solid" "red")
.....Racket turns that into

Write the Definition, giving variable names to all your input values.

(define (red-square size)
function name variable names

(rectangle size size "solid" "red")

Word Problem: yard-area

Use the Design Recipe to write a function yard-area, which takes in the width and length of a yard, and returns the area of the yard.

(Don't forget: $area = length * width$!)

Every contract has three parts:

; yard-area : number number -> number
name Domain Range

; Takes in length and width of a yard and gives back its area
What does the function do?

On the computer, write an example of your function in action, using EXAMPLE.

(EXAMPLE (yard-area 5 3)
Use the function here

(* 5 3)
find another way to get the same result here

(EXAMPLE (yard-area 8 2)
Use the function here...

(* 8 2)
find another way to get the same result here

Write the Definition, giving variable names to all your input values.

(define (yard-area length width)
function name variable names

(* length width)

Word Problem: update-danger

Use the Design Recipe to write a function update-danger, which takes in the danger's x-coordinate and produces the next x-coordinate, which is 50 pixels to the left.

Every contract has three parts:

; update-danger : number -> number
name Domain Range

; Takes in danger's current x-coordinate and adds 50 to it
What does the function do?

On the computer, write an example of your function in action, using EXAMPLE.

(EXAMPLE (update-danger 500)
Use the function here

(- 500 50))
find another way to get the same result here

(EXAMPLE (update-danger 140)
Use the function here...

(- 140 50))
find another way to get the same result here

Write the Definition, giving variable names to all your input values.

(define (update-danger dangerX)
function name variable names

(- dangerX 50))

Word Problem: update-target

Write a function update-target, which takes in the target's x-coordinate and produces the next x-coordinate, which is 50 pixels to the right.

Every contract has three parts:

; update-target : number -> number
name Domain Range

; Takes in the target's current x-coordinate and adds 50 to it
What does the function do?

On the computer, write an example of your function in action, using EXAMPLE.

(EXAMPLE (update-target 60)
Use the function here

(+ 60 50)
find another way to get the same result here

(EXAMPLE (update-target 125)
Use the function here...

(+ 125 50)
find another way to get the same result here

Write the Definition, giving variable names to all your input values.

(define (update-target targetX)
function name variable names

(+ targetX 50)

Sam is in a 640 x 480 yard. How far he can go to the left and right before he's out of sight?

1. A piece of Sam is still visible on the left as long as... (> x -50)

2. A piece of Sam is still visible on the right as long as... (< x 690)

3. Draw the Circle of Evaluation for these two expressions in the circles below:

Word Problem: safe-left?

Use the Design Recipe to write a function *safe-left?*, which takes an x-coordinate and checks to see if it is greater than -50.

Every contract has three parts:

; safe-left? : number -> boolean
name Domain Range

; Takes in the x-coordinate and checks if it's greater than -50
What does the function do?

On the computer, write an example of your function in action, using EXAMPLE.

(EXAMPLE (safe-left? 20)
Use the function here

(> 20 -50))
find another way to get the same result here

(EXAMPLE (safe-left? -200)
Use the function here...

(> -200 -50))
find another way to get the same result here

Write the Definition, giving variable names to all your input values.

(define (safe-left? x)
function name variable names

(> x -50))

Word Problem: safe-right?

Use the Design Recipe to write a function safe-right?, which takes an x-coordinate and checks to see if it is less than 690.

Every contract has three parts:

; safe-right? : number -> boolean
name Domain Range

; takes in the x-coordinate and checks if it is less than 690
What does the function do?

On the computer, write an example of your function in action, using EXAMPLE.

(EXAMPLE (safe-right? 350)
Use the function here

(< 350 690)
find another way to get the same result here

(EXAMPLE (safe-right? 900)
Use the function here...

(< 900 690)
find another way to get the same result here

Write the Definition, giving variable names to all your input values.

(define (safe-right? x)
function name variable names

(< x 690)

Write the Circles of Evaluation for these statements, and then convert them to Racket

1. Two is less than five, and zero is equal to six.

(and (< 2 5) (= 0 6))

2. Two is less than four or four is equal to six.

(or (< 2 4) (= 4 6))

Word Problem: onscreen?

Use the Design Recipe to write a function onscreen?, which takes in an x-coordinate and checks to see if Sam is safe on the left and safe on the right.

Every contract has three parts:

; onscreen? : number -> boolean

name Domain Range

; Takes in the x-coordinate and checks if target is protected on the /left and the right

What does the function do?

On the computer, write an example of your function in action, using EXAMPLE.

(EXAMPLE (onscreen? 900))

Use the function here

(and (safe-left? 900) (safe-right? 900))

find another way to get the same result here

(EXAMPLE (onscreen? 355))

Use the function here...

(and (safe-left? 355) (safe-right? 355))

find another way to get the same result here

Write the Definition, giving variable names to all your input values.

(define (onscreen? x))

function name variable names

(and (safe-left? x) (safe-right? x))

Word Problem: cost

Luigi's Pizza has hired you as a programmer. They offer "pepperoni" (\$10.50), "cheese" (\$9.00), "chicken" (\$11.25) and "broccoli" (\$10.25). Write a function called cost which takes in the name of a topping and outputs the cost of a pizza with that topping.

Every contract has three parts:

; cost : string -> number
name Domain Range

On the computer, write an example of your function for each topping, using EXAMPLE.

(EXAMPLE (cost "pepperoni") 10.50)
Use the function here What should the function produce?

(EXAMPLE (cost "cheese") 9.00)
Use the function here What should the function produce?

(EXAMPLE (cost "chicken") 11.25)
Use the function here What should the function produce?

(EXAMPLE (cost "broccoli") 10.25)
Use the function here What should the function produce?

Write the Definition, giving variable names to all your input values.

(define (cost topping)
function name variable names

(cond _____

[(string=? "pepperoni" topping)	10.50]
[(string=? "cheese" topping)	9.00]
[(string=? "chicken" topping)	11.25]
[(string=? "broccoli" topping)	10.25]
[else	1000000000))]

Word Problem: update-player

Write a function called update-player, which takes in the player's y-coordinate and the name of the key pressed, and returns the new y-coordinate.

Every contract has three parts:

; update-player : number string -> number
name Domain Range

On the computer, write an example of your function for each key, using EXAMPLE.

(EXAMPLE (update-player 40 "up") (+ 40 20))
Use the function here What should the function produce?

(EXAMPLE (update-player 400 "down") (- 400 20))
Use the function here What should the function produce?

Write the Definition, giving variable names to all your input values.

(define (update-player playerY key)
function name variable names

(cond _____

[(string=? "up" key)	(+ playerY 20)]
[(string=? "down" key)	(- playerY 20)]
[else	playerY]))

Word Problem: line-length

Write a function called line-length, which takes in two numbers and returns the difference between them. It should always subtract the smaller number from the bigger one.

Every contract has three parts:

; line-length : number number -> number
name Domain Range

(EXAMPLE (line-length 10 5) (- 10 5))
Use the function here What should the function produce?

(EXAMPLE (line-length 2 8) (- 8 2))
Use the function here What should the function produce?

Write the Definition, giving variable names to all your input values that change.

(define (line-length a b)
function name variable names

(cond

[(> a b)

(- a b)]

[else

(- b a)))]

The distance between the points (0, 0) and (4, 3) is given by:

$$\sqrt{(line - length\ 4\ 0)^2 + (line - length\ 3\ 0)^2}$$

Convert the formula above into a Circle of Evaluation (We've already gotten you started!)

Convert the Circle of Evaluation into Racket code:

```
(sqrt (+ (sq (line-length 4 0))
         (sq (line-length 3 0)))))
```

Word Problem: distance

Write a function distance, which takes FOUR inputs:

- *px*: The x-coordinate of the player
- *py*: The y-coordinate of the player
- *cx*: The x-coordinate of another game character
- *cy*: The y-coordinate of another game character

It should return the distance between the two, using the Distance formula:

$$\square \text{ Distance} = ((\text{line-length px cx})^2 + (\text{line-length py cy})^2)$$

;distance_____ : _____number number number number ____ -> _____number_____
name Domain Range

;Takes in player x and player y, character x and character y, and gives distance between them
What does the function do?

(EXAMPLE (distance 100 200 300 400_____))
Use the function here

(sqrt (+ (sq (line-length 100 300)) (sq (line-length 200 400))))
find another way to get the same result here

(EXAMPLE (distance 300 200 400 500_____))
Use the function here...

(sqrt (+ (sq (line-length 300 400)) (sq (line-length 200 500))))
find another way to get the same result here

(define (distance_____ px py cx cy_____))
function name variable names

(sqrt (+ (sq (line-length px cx))
(sq (line-length py cy))))

Use the function here

find another way to get the same result here

Use the function here...

find another way to get the same result here

function name

```
____(< (distance px py cx cy) 75))_____
```

Catchy Intro: Feel like you never get enough to eat? So does Leo. Come catch your prey,
and escape the zookeeper!

Name, Age, Grade: Jessica Programmer, 12, 7th grade

Game Title: Run for your Supper

Back Story:One day, a young lion was sitting in his cage. He saw an escaped gazelle come
running past. It was lunch time, and he was hungry, so he leapt out to catch food. He has
to run fast to grab food and escape the evil zookeeper.

Characters: Player: Leo the lion.

Danger: Zoe Zookeeper.

Target: Gary Gazelle

Explain a piece of your code: My update-danger function takes in the current x
coordinate of the gazelle, and adds 50 to it. This moves the gazelle 50 pixels to the right.

For each question, circle the answer that fits best.

Was the introduction catchy? No way! A little. Definitely!

Did they talk about their characters? No way! A little. Definitely!

Did they explain the code well? No way! A little. Definitely!

Did they speak slowly enough? No way! A little. Definitely!

Did they speak loudly enough? No way! A little. Definitely!

Were they standing confidently? No way! A little. Definitely!

Did they make eye contact? No way! A little. Definitely!

For each question, circle the answer that fits best.

Was the introduction catchy? No way! A little. Definitely!

Did they talk about their characters? No way! A little. Definitely!

Did they explain the code well? No way! A little. Definitely!

Did they speak slowly enough? No way! A little. Definitely!

Did they speak loudly enough? No way! A little. Definitely!

Were they standing confidently? No way! A little. Definitely!

Did they make eye contact? No way! A little. Definitely!

Write a function called red-shape, which takes in the name of a shape (“circle”, “triangle”, “star” or “rectangle”), and draws that shape. All shapes should be solid and red, and can be whatever size you choose

; red-shape : string -> image
 name Domain Range
 ; Given the name of a shape ("circle", "triangle", "star" or "rectangle"), produce a solid red shape

What does the function do?

(EXAMPLE (red-shape "circle") (circle 50 "solid" "red"))

Use the function here What should the function produce?

(EXAMPLE (red-shape "triangle")) (triangle 50 "solid" "red")
 Use the function here What should the function produce?

(EXAMPLE `(_red-shape "star"_____)` `____(star 50 "solid" "red")____`
 Use the function here What should the function produce?

(EXAMPLE <u>(_red-shape "rectangle"__)</u>)	<u>(rectangle 50 90 "solid" "red")</u>)
Use the function here	What should the function produce?

```
(define (_red-shape_____ _shape_____)
      function name      variable names
      (cond_____

```

(string=? "circle" shape)	(circle 50 "solid" "red")
(string=? "triangle" shape)	(triangle 50 "solid" "red")
(string=? "star" shape)	(star 50 "solid" "red")
(string=? "square" shape)	(rectangle 50 50 "solid" "red")
else	(circle 50 "solid" "red")

Racket Code	Algebra
(define x 10)	$x = 10$
(define y (* x 2))	$y = x * 2$
(define z (+ x y))	$z = x + y$
(define age 14)	$age = 14$
(define months (* age 12))	$months = age * 12$
(define days (* months 30))	$days = months * 30$
(define hours (* days 24))	$hours = days * 24$
(define minutes (* hours 60))	$minutes = hours * 60$
(define (double x) (* x 2))	$double(x) = x * 2$
(define (area length width) (* length width))	$area(length, width) = length * width$
(define (circle-area radius) (* pi (sq radius)))	$circle-area(radius) = pi * radius^2$
(define (distance x1 y1 x2 y2) (sqrt (+ (sq (- x1 x2)) (sq (- y1 y2)))))	$distance(x1, y1, x2, y2) = \sqrt{(x1 - x2)^2 + (y1 - y2)^2}$

A rocket is flying from Earth to Mars at 80 miles per second. Write a function that describes the distance D that the rocket has traveled, as a function of time t .

Every contract has three parts:

;	<u>D</u>	:	<u>Number</u>	->	<u>Number</u>
	name		Domain		Range
;	<u>Given the number of seconds, produce the height of the rocket if it moves at 80mi/sec</u>				
	<i>What does the function do?</i>				

Write an example of your function for some sample inputs

$$D(0) = 80 * 0$$

Use the function here

What should the function produce?

$$D(1) = 80 * 1$$

Use the function here

What should the function produce?

$$D(2) = 80 * 2$$

Use the function here

What should the function produce?

$$D(3) = 80 * 3$$

Use the function here

What should the function produce?

Write the formula, giving variable names to all your input values.

$$D(\text{time}) = 80 * \text{time}$$

A rocket is traveling from Earth to Mars at 80 miles per second. Write a function that describes the time the rocket has been traveling, as a function of distance.

Every contract has three parts:

; time : Number -> Number
name Domain Range

; Given the distance, produce the time-traveled if it moves at 80mi/sec
What does the function do?

Write an example of your function for some sample inputs

time(0) = 0/80

Use the function here What should the function produce?

time(10) = 10/80

Use the function here What should the function produce?

time(80) = 80/80

Use the function here What should the function produce?

time(190) = 190/80

Use the function here What should the function produce?

Write the Formula, giving variable names to all your input values.

time(distance) = distance/80

A rocket leaves Earth, headed for Mars at 80 miles per second. **At the exact same time**, an asteroid leaves Mars traveling towards Earth, moving at 70 miles per second. If the distance from the Earth to Mars is 50,000,000 miles, how long will it take for them to meet?

Every contract has three parts:

; **collide** : **Number** -> **Number**
name Domain Range

; Given the distance between a rocket (moving at 80mi/sec) & asteroid (70mi/sec), when will they collide?
What does the function do?

Write an example of your function for some sample inputs

collide(0) = 0/150

Use the function here What should the function produce?

collide(150) = 150/150

Use the function here What should the function produce?

collide(700) = 700/150

Use the function here What should the function produce?

collide(50,000,000) = 50,000,000/150

Use the function here What should the function produce?

Write the Formula, giving variable names to all your input values.

collide(distance-between) = distance-between/150

[REDACTED]

Write an example of your function for some sample inputs
