Unit 2

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Word Problem: double-radius

Write a function *double-radius*, which takes in a radius and a color. It produces an outlined circle of whatever color was passed in, whose radius is twice as big as the input.

Contract+Purpose Statement

Every contract has three parts:

_____ : _____ → _____
name Domain Range

What does the function do?

Give Examples

Write examples of your function in action

examples:

_____ (_____) is
the user types...

_____ ...which should become

_____ (_____) is
the user types...

end _____ ...which should become

Function

Circle the changes in the examples, and name the variables.

Write the code, copying everything that isn't circled, and using names where you find variables!

fun _____ (_____) :

end

Word Problem: double-width

Write a function *double-width*, which takes in a number (the length of a rectangle) and produces a rectangle whose width is twice the given length.

Contract+Purpose Statement

Every contract has three parts:

_____ : _____ → _____
name Domain Range

What does the function do?

Give Examples

Write examples of your function in action

examples:

_____ (_____) is
the user types...

_____ ...which should become

_____ (_____) is

_____ ...which should become
end

Function

Circle the changes in the examples, and name the variables.

Write the code, copying everything that isn't circled, and using names where you find variables!

fun _____ (_____) :

end

Word Problem: next-position

Write a function *next-position*, which takes in two numbers (an x and y-coordinate) and returns a JumperState, increasing the x-coordinate by 5 and decreasing the y-coordinate by 5.

Contract+Purpose Statement

Every contract has three parts:

_____ : _____ → _____
name Domain Range

What does the function do?

Give Examples

Write examples of your function in action

examples:

_____ (_____) is
the user types...

_____ ...which should become

_____ (_____) is
the user types...

_____ ...which should become

end

Function

Data Structure

A CakeT is a **flavor, layers, & is-iceCream**

data **CakeT**:

```
| cake( _____  
      _____  
      _____)
```

end

To make instances of this structure, I would write:

cake1 = _____

cake2 = _____

To access the fields of **cake2**, I would write:

```
_____  
_____  
_____
```

Word Problem: taller-than

Write a function called *taller-than*, which consumes two CakeTs, and produces true if the number of layers in the first CakeT is greater than the number of layers in the second.

Contract+Purpose Statement

_____ : _____ → _____

Give Examples

Write examples of your function in action

examples:

_____ (_____) is
the user types...

...which should become

_____ (_____) is
the user types...

...which should become

end

Function

Circle the changes in the examples, and name the variables.

Write the code, copying everything that isn't circled, and using names where you find variables!

fun _____ (_____) :

end

Word Problem: will-melt

Write a function called *will-melt*, which takes in a *CakeT* and a temperature, and returns true if the temperature is greater than 32 degrees, AND the *CakeT* is an ice cream cake.

Contract+Purpose Statement

_____ : _____ → _____

Give Examples

Write examples of your function in action

examples:

_____ (_____) is
the user types...

...which should become

_____ (_____) is
the user types...

...which should become

end

Function

draw-state

Write a function called *draw-state*, which takes in a *SunsetState* and returns an image in which the sun (a circle) appears at the position given in the *SunsetState*. The sun should be behind the horizon (the ground) once it is low in the sky.

Contract+Purpose Statement

draw-state : _____ → Image

Write an expression for each piece of your final image

Sun	
Ground	
Sky	

Write the draw-state function, using put-image to combine your pieces

fun _____ (_____) :

Collision

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Distance:

The Player is at (4, 2) and the Target is at (0, 5).

Distance takes in the player's x, player's y, character's x and character's y.

Use the formula below to fill in the EXAMPLE:

$$\sqrt{(4 - 0)^2 + (2 - 5)^2}$$

Convert it into a Circle of Evaluation. (We've already gotten you started!)

Convert it into Pyret code:

Word Problem: distance

Write a function distance, which takes *FOUR* inputs:

- ☐ *px*: The x-coordinate of the player
- ☐ *py*: The y-coordinate of the player
- ☐ *cx*: The x-coordinate of another game character
- ☐ *cy*: The y-coordinate of another game character

It should return the distance between the two, using the Distance formula:

$$\text{Distance}^2 = (px - cx)^2 + (py - cy)^2$$

Draw a sketch for three distinct moments of the animation, focusing on the new behavior

--	--	--

Sketch A

Sketch B

Sketch C

What NEW things are changing? Are they independent of existing fields?

Thing	How does it change?	Does it change consistently? Independently?

What fields do you need to represent the NEW and independent things that change?

Field name (dangerX, score, playerIMG...)	Datatype (Number, String, Image, Boolean...)

Make a To-Do List, and check off each as "Done" when you finish each one.

Component	When is there work to be done?	To-Do	Done
Data Structure	<i>If any new field(s) were added, changed or removed</i>	<input type="checkbox"/>	<input type="checkbox"/>
draw-state	<i>If something is displayed in a new way or position</i>	<input type="checkbox"/>	<input type="checkbox"/>
next-state-tick	<i>If the Data Structure changed, or the animation happens automatically</i>	<input type="checkbox"/>	<input type="checkbox"/>
next-state-key	<i>If the Data Structure changed, or a keypress triggers the animation</i>	<input type="checkbox"/>	<input type="checkbox"/>
reactor	<i>If either next-state function is new</i>	<input type="checkbox"/>	<input type="checkbox"/>

Make a sample instance for each sketch from the previous page:

_____ **A** = _____

_____ **B** = _____

_____ **C** = _____

Write at least one NEW example for one of the functions on your To-Do list

If you have another function on your To-Do list , write at least one NEW example

Animation Extension Worksheet

Describe the goal of your change: what new feature or behavior will it add to your animation?
