

# Contracts

Consider the following contract:

```
text :: (str :: String, size :: Number, color :: String) -> Image
```

What is the **Name** of this function? text

How many things are in this function's **Domain**? three

What is the **type** of this function's **first argument**? String

What is the **name** of this function's **second argument**? size

What is the **Range** of this function? Image

Below, circle which expression is the correct application of this function, based on its contract.

1. `text("Bootstrap:Data Science", "purple", 60)`

2. `text(circle(99, "solid", "green"))`

3. `text("red", 25, "Andrew")`

4. `text("Angela", 25, "purple")`
